Habka Shaqada Gudaha ee Wadnaha

Conduction system of the Heart

Garaac kasta oo ah wadnaha waxa lagu xakameeyaa oo iskuduwa dareenka korontada. Dareenku wuxuu ka bilowdaa qeybta sare ee wadnaha, labada qalbac, oo shaqada ayuu amraa. Dabadeedna waxaa loo gudbiyaa qeybta hoose ee wadnaha, qalbacyada, oo helaya amar in uu wadnuhu shaqeeyo.

Dareencilinta korontada waxay ku bilaabataa qaab loo yiraahdo **hagaajinta garaacista**. Hagaajinta garaacista ayaa go'aaminaya sida uu wadnuhu u gaabinayo ama u degdegayo. Waa garaaca wadnaha ee dabiiciga ah. Dareenka korontada wuxuu ka baxaa hagaajinta garaacista oo wuxuu aadayaa qeybaha ugu sarreeya isagoo ku amraya in wadnuhu shaqeeyo.

Calaamadaha korontada ayaa markaa soo gaara bartamaha wadnaha oo waxaa la yiraahdaa **nudeenka wadne-gaabiska**, ama **nudeenka AV**. Qaabkaas wax yar ayuu dib u dhigayaa dareenka oo wuxuu caawinayaa in uu jiro wakhti ku filan oo uu dhiiggu uga baxo qeybaha oo wuxuu galo qalbacyada si ay si habboon u buuxiyaan.

Korontadu waxay ka baxaysaa wadne-gaabiska oo waxaa hoos u dhaca qeybaha muruq gaar ah oo u shaqeeya sida fiilooyinka. Kuwaas waxaa loo yiraahdaa **Korontada Wadnaha** iyo **qeybaha korontada**. Kuwaas waa dariiqo keliya ee korontadu kor ka imaaneyso oo soo aadeysa gunta ee wadnaha. Taas ayaa u qaadeysa dareenka korontada ee qalbacyada midig iyo bidix oo sababeysa in uu wadnuhu si habsami leh oo fiican ugu shaqeeyo hawsha qeybta sare.
